Who We Are:

We are a Hamburg based company who develop, manufacture and sale fuel cell heating units to be deployed in single family homes. Founded in 1999, the company took up its position as a subsidiary of the Baxi Group in 2002. Here it advanced to become the brain pool of the Group for innovative product developments based on combined heat and power technology. Since the beginning of November 2009, the Baxi Group – along with Baxi Innotech – has belonged to the BDR Thermea constellation, Europe's third largest manufacture in the heating industry. This Group –formed out of a merger of BAXI with De Dietrich Remeha – is active in even greater measure in traditional and international growth markets with its innovative and top quality products and services.

What We Do:

In the development of our highly efficient fuel cell heating unit, we will be meeting the demands of energy policy for increased efficiency with a sustainable, environmentally responsible and clean solution. Therefore we are a partner of the ene.field project as well we has been participating in the Callux project since 2008, the practice test carried out by the German government and the industry to prepare stationary fuel cell heating units for the market.

Our role in ene.field project:

Partnership that shapes the market - Guido Gummert, Managing Director of Baxi Innotech, made the following comments on the pronouncements of the European Fuel Cell Initiative: "The development of this technology has reached the stage of technical maturity. A crucial step towards commercialization has now been taken with the subsidized project "ene.field", particularly with regard to the introduction in other potential markets outside of Germany. A very important related effect is that all the major manufacturers and development partners now approach and shape the future market together with their innovations."

The logo for ene.field, featuring the word "ene" in blue, a yellow dot, and "field" in blue, with a yellow star to the right.
