

PRESS RELEASE

14 July 2015

ene.field★

Send us your myCHP stories today!

myCHP, a new campaign showing CHP users sharing real-life experiences of how cogeneration serves the heat and power needs of businesses and home-owners all over Europe, is now online!

What do Jørn the pig farmer, Steen the campsite owner and Margaret the primary school head-teacher have in common? All these people chose CHP to deliver their heat and power needs. They use cogeneration to provide efficient, reliable and secure energy for their farm, campsite and school, allowing them to focus on satisfying the needs of their customers and pupils alike. That's their CHP experience. Send us yours today!

myCHP is a community of users, installers and manufacturers who enable and are committed to using CHP technologies to meet the energy needs of their businesses and homes. The campaign seeks to put a human face on the combined heat and power sector. The myCHP campaign will highlight stories and personal experiences of cogeneration users, showcasing the many different ways in which CHP plays a role in people's daily lives.

The stories will be presented as short case studies featuring individuals using CHP as part of their everyday experience. The website section will be complemented by a dedicated Twitter account and will feature in the wider ene.field and COGEN Europe communications. The campaign will support ene.field and COGEN Europe's advocacy work towards the EU institutions and other Brussels stakeholders and could be adapted to serve national cogeneration associations, while also helping to raise awareness of CHP among the wider public. To find out more about the myCHP campaign, watch the launch presentation and get an idea of what the case studies will look like, [please visit the webpage](#).

As an interested party to the cogeneration community, you are best-placed to identify candidates for myCHPs from among your network. If you have a personal myCHP story to tell, [please complete and submit this application form to COGEN Europe for consideration](#) (accompanied by a photograph that fires the imagination).

Please direct any enquiries about the myCHP campaign to COGEN Europe Communications Manager Andrew Williams (andrew.williams@cogeneurope.eu).

About ene.field

The ene.field project is the largest European demonstration of the latest smart energy solution for private homes, micro-CHP. It will see up to 1,000 households across Europe able to experience the benefits of this new energy solution. The five-year project uses modern fuel cell technology to produce heat and electricity in households and empowers them in their electricity and heat choices.

The ene.field project is co-funded by the European Commission's Fuel Cells and Hydrogen Joint Undertaking ([FCH-JU](#)), and brings together 25 partners, including 8 European manufacturers who will make the products available across 12 EU Member States.
